

PV Panel DPP Workshop

Build one mock Digital Product Passport in 15 minutes: start from the preloaded Chinese PV cell DPP, add Belgian assembly inputs, then read and export the result.

Scenario: PV panel assembly in Belgium
Linked upstream data: PV cell DPP from China
Workshop output: one complete panel DPP package

1 - Product setup

Play the role of a PV panel manufacturer, add the information below in the right field.

2 - Inventory

Add each material/energy row using the quantities in the table below

3 - Results

Look at the results and see the most impactful materials at a glance. Explore the DPP structure by opening the DPP.

1 - Product setup

PRODUCT NAME PV panel	REPORTING LOCATION Belgium (BE)
REFERENCE FLOW 1 assembled PV panel	LIFECYCLE STAGE Manufacturing
REPORTING ROLE PV Panel assembler (2026)	COMPANY NAME <i>Invent one ☺</i>
REFERENCE FLOW AMOUNT and UNIT 1 – Assembled PV panel	PRODUCT SPECIFICATIONS (example) Electrical Specifications: Cell Type: Monocrystalline PERC (G12 format); Number of Cells: 20 (arranged in a 4 × 5 matrix); Rated Maximum Power (Pmax): 130 W.

2 - Inventory

Click Add component and check that the **Activity type** is **Database activity**

Feel free to add **Description** and **Notes/evidence**.

Component name	Quantity	Where	Database entry
Preloaded single PV cell DPP	20 cells	CN	Linked DPP already loaded BUT add the cells number
Aluminium frame	2 kg	BE	other non-ferrous metal products (market for)
Front glass	9 kg	BE	glass and glass products - residual (market for)
Copper wiring	100 g	BE	copper products (market for)
Process chemicals	141 g	BE	chemicals nec (market for)
Packaging board	700 g	BE	paper and paper products - residual
Assembly electricity	14.0 kWh	BE	production of electricity (market for)

Add also ONE **Direct emission** from **Activity type**. 3 kg of nitrogen oxides in Belgium

3 - Results

Feel free to check the results. A few things to check:

Total panel impact Look at the GWP100 result for the assembled panel. Which are the main contributors to the environmental impact?	Open the DPP link Open the linked DPP connected to PV panel cell and explore it.	Check component contribution From the green bars explore the relative contribution of each component
